

Marketing Audit Report

<https://academicar.com>

Generated: June 13, 2026

Overall Marketing Score: 69/100 (Grade: C)

AcademicAR has a clear, confident product story and unusually strong technical SEO for an early-stage product. The homepage passes the 5-second test ('Publish Interactive 3D Models with Your Research'), the Traditional-vs-AcademicAR comparison is genuinely persuasive, and the codebase ships sitemap.xml, robots.txt, canonical URLs, Open Graph/Twitter cards, and JSON-LD structured data (Organization, WebSite, SoftwareApplication, FAQPage). A 6-post blog and 12 discipline landing pages give it a real content-marketing engine. The single biggest gap is the absence of social proof: the final CTA invites visitors to 'join researchers, universities and journals already using AcademicAR' but there is not one logo, testimonial, named institution, or usage number to back it. For an academic audience, where peer and institutional validation drive adoption, this is the highest-leverage fix. The second structural gap is a single conversion path: every CTA points to register, with no email capture or lead magnet for the majority who arrive via content but are not ready to sign up. NOTE: the live site was blocked by network policy, so this audit was run against the actual rendered marketing copy in the repository (source of truth for on-page content and SEO tags); it excludes live page-speed, Core Web Vitals, reputation, and real traffic data.

Score Breakdown

Category	Score	Weight	Status
Content & Messaging	78/100	25%	Strong
Conversion Optimization	62/100	20%	Needs Work
SEO & Discoverability	80/100	20%	Strong
Competitive Positioning	58/100	15%	Needs Work
Brand & Trust	60/100	10%	Needs Work
Growth & Strategy	65/100	10%	Needs Work

Key Findings

Severity	Finding
Critical	No social proof anywhere on the page — the CTA claims institutions 'already using AcademicAR' but shows no logo, testimonial, named university, citation, or usage number. Highest-leverage gap for an academic audience.
Critical	Single conversion path — every CTA points to register. No email capture or lead magnet for the content-driven top-of-funnel traffic (blog + 12 discipline pages) that is not ready to sign up.
High	Homepage (landing.html) does not override the meta description block, so it inherits the generic base default instead of a homepage-specific one.
High	No competitor awareness or comparison content (vs Sketchfab, figshare, Zenodo). Concedes high-intent comparison search traffic and lets prospects frame the comparison themselves.
High	Hero CTA 'Start Publishing' carries no risk-reducer despite a real free tier — no 'free / no credit card' signal at the point of action.
Medium	Pricing page handles objections well but has no inline pricing FAQ (what happens at expiry, renewal, is \$9.90 really one-time, refunds).
Medium	'Featured' plan styling is on Extended Archive, not the Academic plan that is the primary conversion target — attention anchored on the wrong tier.
Medium	About page has a strong mission but no team, founder, or institutional affiliation — exactly the credibility signals academic buyers look for.
Low	OG/Twitter share image uses clinical-spatial-hero.png while the hero product shot is the interactive 3D viewer — the shared-link preview may not show the actual product experience.
Low	The strongest proof asset — 'View Example Publication' — is used once in the hero and not reinforced across content pages.

Prioritized Action Plan

Quick Wins (This Week)

1. Add a custom homepage meta description matching the title (landing.html ~line 2): 'Publish interactive 3D models, AR, and stable QR codes with your papers, theses, and posters. No coding — upload GLB/STL/OBJ/FBX and share.'
2. Place one real social-proof element above the CTA band: a named pilot university, a usage number, or the real example publication (DOI + screenshot) you already have.
3. Make the hero CTA reduce risk: relabel 'Start Publishing' to 'Start free — no credit card', or add a micro-line under the button.
4. Soften or substantiate the 'already using AcademicAR' claim so an academic reader does not discount it.
5. Add a 4-5 question pricing FAQ inline on the pricing page (expiry, renewal, one-time clarity, refunds).
6. Switch the 'Most popular / featured' styling to the Academic plan, your primary conversion target.
7. Replace the OG/Twitter image with a shot of the actual 3D-viewer / AR experience.

Medium-Term (1-3 Months)

1. Add an email-capture / soft-CTA path (lead magnet: '1-page guide to adding 3D/AR to your next paper') so content traffic does not bounce uncaptured.
2. Ship one real, citable example publication (DOI + embedded viewer + QR + screenshot) and feature it from the hero, AR section, blog, and discipline pages.
3. Build 1-2 comparison pages: 'AcademicAR vs Sketchfab for research' and 'vs figshare/Zenodo for 3D supplementary data' for positioning and high-intent SEO.
4. Strengthen Brand & Trust: add a short founder/team note, any lab/university affiliation, and journal/institution logos as they become available.
5. Make the per-model pricing differentiator explicit ('Pay once per model. No subscription.') and clarify the renewal/expiry path to remove dead-link fear.

Strategic (3-6 Months)

1. Build an institutional / departmental sales motion: a 'for universities' page, a one-page PDF, and a named pilot — academic sales are top-down and one department deal outweighs many individual models.
2. Run an SEO content-gap campaign by discipline targeting real researcher queries ('how to add 3D model to thesis', 'interactive figures for journal article', 'QR code for poster 3D model'), interlinked with discipline and comparison pages.
3. Launch a browsable gallery of published models as a growth loop: ongoing social proof, SEO surface, and an author-driven referral mechanic.

Competitive Landscape

	AcademicAR	Sketchfab	figshare / Zenodo	Video / GIF figure
Positioning	AcademicAR	General 3D viewer/embed	Research data deposit	Static 'show' of 3D
Pricing	AcademicAR	Free-paid tiers	Free / institutional	Free
Social Proof	AcademicAR	Large creator base	Academic ubiquity	n/a
Content	AcademicAR	Community + blog	Docs / DOIs	n/a

Methodology

This audit evaluates six key dimensions of marketing effectiveness. Each category is scored 0-100 based on industry best practices and competitive benchmarks.

Category	Weight	What We Measure
Content & Messaging	25%	Copy quality, value proposition clarity, CTA effectiveness
Conversion Optimization	20%	Funnel design, forms, social proof, friction reduction
SEO & Discoverability	20%	On-page SEO, technical SEO, content structure
Competitive Positioning	15%	Market differentiation, pricing, alternatives strategy
Brand & Trust	10%	Design quality, trust signals, authority indicators
Growth & Strategy	10%	Pricing strategy, acquisition channels, retention
